Volume 01 : Number 091

Date: Wed, 13 Aug 1997 09:37:00 -0400

From: Roy Morgan <morgan@speckle.ncsl.nist.gov>

Subject: Collins "Lower Deck Asy": from R-392???

Glowbuggers and Anchorites,

I have a module I suspect is from the R-392. Is it?

"Lower Deck Asy"

Part No. 506-2206-004

BFO can is Collins PTO type 70J2, Symbol T-602

Main connector is J-613

BNC connector is J-611

V-604 and 609 are 26A6's

V-608 is a 26A7

Size is 5-1/4" by 6-1/4"

If this is from the R-392, I SUPPOSE that I should begin looking for the rest of the radio. (To keep the R-390 and the R-390A's company!)

Keep em Glowing!

Roy, K1LKY since 1959

Well, I got on with the Valiant the evening before last and had a couple of VERY solid QSOs even through the muck and mire and QRN on 80m!

I called CQ for about 15 minutes and then got WA3VJB over in Annapolis.

He was running an FT-101 with external audio into the LINE input for the phone patch audio. This was driving a pair of special 4-400 type tubes in a linear amp at about 200 W, and boy did he sound good!

59 + 20 dog biscuits in both directions, and a very friendly chat ensued. This was on 3880 kHz. I later worked a couple of other guys up in 2-land.

Come on all your boat anchorists and Glowbuggists - get those fire-bottles a cooking!

Bry, AF4K

 Needed Drive potentiometer = 25 K at 4 watts

Anybody have one or know where I can get same??

Thanks - Bry, AF4K
